Can anyone outline the widget calls to display a symmetric
2D table of buttons like the following ?

```
-----  
| BB| |BB| | BB |  
---- ----  
|BBB| | B| |BBBB|  
-----
```

I want all buttons in a column to be the width of the widest button, and
all the buttons/labels/text widgets in a row to be equal height.
I can get the rows to align, or the columns to align, but I can't get
them both to align. (The button names are different lengths.) I get
something like :

```
-----  
|BB| |B| |BB|  
---- ----  
|BBB| |B| |BBBB|  
-----
```

Thanks, Dan
