
Subject: PV-wave into VMS?

Hi all, I'm new to the group and I was wondering of how could I use a code that I wrote in PV-Wave (PC) in an OpenVms station or/and if it can run as a standalone program in any pc (kind of like an executable C program). I'm not a programmer per se so be patient with me.

Things to know:

- OpenVMS 7.2

- no IDL in the workstation (OpenVms)

- I don't want to buy another license of Pv-wave to install in the workstation

to achieve:

- run the code in the OpenVMS or/and run the code as standalone in other PCs

thanks a lot,

Mauricio Barrero
