Hi, I am trying to find the number of values that are within a range
...
I have an Array that has 3 columns and 5 millions lines.
Thats what I am doing ...

number = WHERE((Array[1,*] GE Min) AND (Array[1,*] LE Max), geralX)

I am storing the number inside the variable geralX ...
It is taking 0.23 seconds ... but I want to know if there is a faster
way to find that ...
Thanks
