Subject: RESOLVE_ROUTINE in the .sav file
Posted by alison on Fri, 08 Oct 2004 07:50:35 GMT

Hi,
I am trying to compile an IDL program from within my program,
my code:

```
pro example
  cd,'d:\idl'
  RESOLVE_ROUTINE,'test',/COMPILE_FULL_FILE ,/EITHER
  Resolve_All
  Save, /Routines, File='test.sav'
end
```

I have this program working from the IDL window,but when I try to run it
through
the .sav file I create,I get a Run Time error 'Attempt to call undefined
procedure/function:'test''
I am not able to figure out where I am going wrong.

Thanks for any tips.
