Hello:

region_grow has returned the vector of indices of the region to me in vector newroipixels.

now, i want to get the geometric area and perimeter of this region. How is it possible? i do not want the pixel area! Moreover, is it necessary to use objects? In that case, I am not able to initialize objects as it says that params x and y supplied to obj_new should have (2,n) or (3,n) dimensions. now, assuming image is the original image array and newroipixels are the locations of my roi in image. how do get the geom. area of my roi?

Please reply as it is very urgent.

Also, is it possible to output data from a program to another window.

Thanks

Pravesh
