Subject: PRINTER device on Linux

Folks,

Has anyone gotten the PRINTER device to work on a Linux
machine?

I read this article on the RSI web page about configuring
the PRINTER device:

   http://www.rsinc.com/services/techtip.asp?ttid=2872

I got my printer apparently set us and my computer
able to send info to the printer. But when I send
output (an image), I get the error message:

   %Can't set RGB color on an indexed destination.

A page comes out of the printer, but there is nothing
on it. Any ideas on what this might mean? Or, on
how I might fix it?

Thanks,

David
