Hi,

I've been creating a scrollable draw widget with a large xsize of 105480 pixels (and a ysize of 220) to hold an array of data of those same dimensions.

Creating the draw widget is no problem. But TV-ing the data array is!

Under Linux I get the error :-

TV : Width and Height must be less than 65526 on this X11 Server.

On my Windows PC, I get this error back from TV :-

TV : Width and Height must be less than 32000.

Is this limitaton OS specific or graphics card specific?

I can always congrid the array down, but it's not my first choice.

Cheers,

Andrew
