Hi all:

I am building an interface to use some of the routines i wrote.

The aim is to allow the user to click on the draw widget to select a specific pixel and then grow a region based on intensity of that pixel. How do we get the interface to supply the pixel co-ordinates to the program? it seems tricky to achieve it.. i am using david's info structure...

also, how to export data generated by IDL to some DB like excel. is there a ODBC specification for IDL?

thanks
Pravesh
