Russ,

I don't think you are paying David enough for a complete solution. :-) But here are some tips: I think what you want is ION, which is split in ION Java and ION script. ION script is super easy to use and may do the trick for you. ION Java is a little more involved; I did not need the increased level of complexity, so I stuck with ION script. Read the ION guide on you IDL CD (or online help if installed) for some examples. Oh, do prepare yourself though for some hefty license fees.

Haje

PS: I thought I saw a long time ago a free perl script to use for this purpose, but I have no idea anymore where I saw it. Google, google, google...
