Hi

I wonder if anyone could help me with the following (especially Dave Fanning - I am buying your book as soon as I get funding clearance!).

I have written an IDL program which takes a large dataset and does a lot of maths on it. It is quick because it is all matrix transformations. I imagine it would be very slow if implemented in java or something. The program has a gui which i would like people to access over the web. how is this done in IDL?

Thanks

Russ
