I actually have a rather long list of enhancements I've collected in the past couple of months for ATV. :-)

I've even gone so far as to look at the code and see how hard it would be to make some small changes. Compared to a lot of code you find on the Internet, this code is pretty well written. Certainly it would not be as big a chore to do this as I was afraid it would be.

But I was more interested in building something like ATV (with enhancements) as an example program for my Catalyst Library code. What is slowing me down is the time to learn about all those great Astronomy Library routines that already do so much of the work!

I'm going to be in the Washington area the first of the year, Wayne. Maybe we ought to get together for a few days and see if we can work something out. :-)

Cheers,

David
