I have no idea how ENVI does this, or even what "2% of saturation" means, but I'm feeling reckless.

Here is how I would do it:

```
minImage = Min(image, Max=maxImage)
range = Float(maxImage) - Min(image)
onePercent = range * 0.01
low = minImage + onePercent
high = maxImage - onePercent
stretchedImage = BytScl(image, Min=low, Max=high)
TV, stretchedImage
```

Cheers,

David
