The following code gives me syntax error for the last two endfor statements. I am trying to use the nested for loop to print the value of x. I have tried &\$ on the 6th and 7th while \$ on 1 and 2. Any help would be appreciated

```
1 for i = 0, 20 do begin
2   for j = 0, 20 do begin
3     for k = 0, 5 do b[0,k] = 0.5^2
4     funct_addnumbers, a,b,x ; where x is the result
5     print,x
6   endfor
7 endfor
```

Thanks.
