## Subject: Help with Nested FOR Loop Posted by coold on Fri, 10 Dec 2004 20:44:10 GMT

View Forum Message <> Reply to Message

The following code gives me syntax error for the last two endfor statements. I am trying to use the nested for loop to print the value of x. I have tried &\$ on the 6th and 7th while \$ on 1 and 2. Any help would be appreciated

```
1 for i = 0, 20 do begin

2 for j = 0, 20 do begin

3 for k = 0, 5 do b[0,k] = 0.5^2

4 funct_addnumbers, a,b,x; where x is the result

5 print,x

6 endfor

7 endfor
```

Thanks. coold
