It would be something like this:

```
tlb = widget_base(title='top level base',/column, base_align_center=1)
basetop = widget_base(tlb, row=1)
basebot = widget_base(tlb, row=1, base_align_center=1)
baseLeft = widget_base(basebot, /column)
baseRight = widget_base(basebot, /column)
w1 = widget_draw(basetop, xsize=512, ysize=512)
w3 = widget_draw(baseLeft, xsize=256, ysize=256)
w4 = widget_draw(baseRight, xsize=128, ysize=128)
widget_control, tlb, /realize
```

Cheers,

David
