Hello,

I have a loop in which computation is performed. I want to display the progress.

```
-----  
tlb = Widget_Base(Column=1, TLB_Frame_Attr=1,title='Work in progress...')  
text1 = widget_text(tlb, value='..... Percent completed .....',xsize=40)  
x = 25  
x = string(x) +' %'  
text2 = widget_text(tlb, value=x)  
CenterTLB, tlb  
Widget_Control, tlb, /Realize  
-----
```

How can I update the x value in the text2 widget while keeping the same top level base ?

I know I should not call widget_control all over the loop but...

Thank you,
