A question concerning the message blocks:

I pass error strings created in a C library to the IDL interpreter using
IDL_MessageFromBlock. Does this call impose a limit on the length of the
string or have I missed something? Several error strings display
truncated at about 380 characters.

The particular call:

```
IDL_MessageFromBlock(spice_msg_block  ,
             ICY_M_SPICE_ERROR,
             IDL_MSG_LONGJMP  ,
             msg          );
```

'msg' can display truncated.

As always,
Ed Wright
