Hi,

I have trouble with repositioning buttons in a GUI.

My GUI consists of 2 slide bars, 2 buttons and a draw widget.

I use a callback via /tlb_size_events to handle user resizing and it works fine for all the mentioned widgets except the 2 buttons.

I try to set their xoffset and y offset like the rest of the widgets, but they fail to respond. They do respond to changing the value property.

Here is a bit of the code:

```
widget_control, (*handles).BUTTON1, xoffset=BUTTON1_x,  
yoffset=buttons_y  
widget_control, (*handles).BUTTON2, xoffset=BUTTON1_x,  
yoffset=buttons_y  
widget_control, (*handles).drawzone, offset=drawzone_x,  
yoffset=drawzone_y, xszie=drawzone_width, yszie=drawzone_height
```

```
widget_control, (*handles).slider_horz, xoffset=horzslider_x,  
yoffset=horzslider_y, xszie=horzslider_width
```

```
widget_control, (*handles).slider_vert, xoffset=vertslder_x,  
yoffset=vertslder_y, yszie=vertslder_height
```

Only the calls to the sliders and the draw widget change positions of the respective widgets.

What am i missing?

Best regards

Soren
