
Subject: double tick marks

Hello again.

I have the following code to produce yet another boring plot

```
A=FINDGEN(100)
PLOT, A
AXIS,/YAXIS,YRANGE=[0,350],/YSTYLE
END
```

Now the secondary y-axis produced by the AXIS-call has not only minor and major tick marks according to the range of [0,350] but also all the tick marks from the primary y-axis. Which is quite annoying since there are now tick marks all over the place. Is there a way to get rid of the tick marks of the primary axis?

Thank you again
Lasse Clausen
