Thanks!

However, I don't get this really to work. It's probably a basic error I am doing, but a code like this will crash.

```
all = ptrarr(n, /allocate_heap)
```

```
FOR i = 0, n-1 DO BEGIN
```

```
  ;..define a, the associated variable (that works)
```

```
  p = ptr_new(a)
```

```
  all(i) = p
```

```
ENDFOR
```

```
;;..extract values back:
```

```
a = all(0)
```

```
pval = *a
```

```
-----
```

I'm not that into pointers so it may be a simple error
