Hello to everybody !

I updated AVI, MPEG, QT reading and writing routine for IDL (5.2, 5.5, 6.1).

Some changes:

1. Now it's possible to set video codec directly, without compression dialog.
2. New keywords CODEC, RATE, QUALITY, IFRAME_GAP, BITRATE for writing AVI.
3. Avisynth preprocessing filters support (deinterlacing, spatial and temporal smoothing, sharpening, color correction, levels control, non-linear editing, and many more)

You can download it from

<http://www.rsinc.com/codebank/search.asp?FID=139>

Best regards,

Oleg
