
Subject: Array of associated variables?

A brief question: Is it in some way or another possible to make an array of associated variables? The examples below don't work but perhaps there is some other way?

for i=1,n do begin
a=assoc(...)
if n_elements(all) le 0 then all=[a] else all=[all,a]
endfor

a=assoc(...)
all=replicate(a,n)

Thanks for any help
