Hi,
We have a problem with WIDED. When a widget is saved, then restored, then "Edit Child" is selected, the program (frequently) hangs, and buttons on WIDED become ineffective. We always get the same error message:

% X windows protocol error: (BadPixmap).
Xlib: sequence lost (0x129a2 > 0x2b0e) in reply type 0x13!

Any Ideas? (We are running IDL 3.6.1 on a Tatung Sparc 10 clone under OpenWindows 3.3)

Thanks, Chris
