Subject: Drawing lines on image and obtaining points of intersection
Posted by Pravesh on Sat, 05 Feb 2005 21:49:31 GMT

Hello,
Thanks to all for keeping this group so lively. This group has been
really helpful to me for all my problems.

I have an image in a window.
I want to draw a set of parallel lines in the window angled to the
horizontal so that the lines cut through the image.

I would also like to obtain the points of intersection of all these
lines with the image for further processing. I'd rather just count
them.

How do I go about it?

Regards,
Pravesh.
