Hi,

I'm hoping that the answer is not to "roll your own" but (and here comes a big run-on sentence)....does anyone know of a file selection utility much like `DIALOG_PICKFILE` that allows the program user to specify a filter and then, if the user changes the filter, *remember* the new one (so that subsequent file selections start with the new filter)? `FSC_FILESELECT` offers the flexibility of obtaining this info from an object reference but it doesn't list the files that match the filter like `DIALOG_PICKFILE`. Nor does `CW_FILESEL` seem to allow the user to change the filter at runtime.

Thanks in advance,

Rob

P.S. By the way I can't even get `CW_FILESEL` to limit the number of files displayed by by setting the `FILTER` keyword to a string array other than "All Files" but that's another story...another posting...
