Hi,

I use IDL for a lot a applications, but now I have a Big problem.
I would like to capture an image from a CCD. I use a frame grabber
(matrox meteor2).

For the moment, i use Matlab with a external call to the "Mil". It's a
library which remote the frame grabber. Whit matlab, i can see, save
and modify my image.
But i wrote a IDL to calculate a lot of think on this image.
I must save the image in a file with Matlab and read it with IDL...
Grrrr...

Do you think is it possible to replace to call external of Matlab by
the same function in IDL... i tried to use "call_external" and
"socket" function whitout succes....
is it possible to call a external library like "Mil" whit IDL, and
how?
Thanks
FM
