Thanks, everyone, for your feedback. It has been invaluable. I've put out a new version today that addresses a number of problems that have arisen. Some my fault, some just, uh, differences in the way things behave on different machines.

Several people have asked for a more natural way of handling the properties of objects on the Annotation tab. These have been modified extensively to meet user expectations. There are still a few things to do, and I appreciate hearing from everyone who has offered comments and suggestions.
