Subject: vector layer comparision in IDL Posted by yp on Tue, 22 Feb 2005 13:59:44 GMT

Is there a sensible way to compare two exported vector layers and compute the residuals using IDL? I am sorry for asking this simple question, but the problem does not seem quite easy for me since the nubmer of *nodes* (x,y) in the exported ASCII data are different and randomly selected... thanks for any suggestions,
