Okay, another object graphics question for everyone. Is there an easy way to shift a histogram over such that the bars are left justified with the data point rather than having the bars centered on the data point?

I realize that I could shift the data itself and then draw the histogram, but there's a voice in the back of my mind that tells me "you're gonna shoot yourself in the foot, kid." Is there some other way to left justify the plot?

-Mike
