Subject: Odd error on startup: FlexIm error -57357
Posted by Phil[2] on Wed, 02 Mar 2005 01:23:50 GMT

Hi,

I'm running into an error when I start IDL, I should mention that I'm
starting it from a batch file called sswidl.bat - as this sets
everything up to use the solar physics libraries I'm using (Solarsoft -
more info at http://www.lmsal.com/solarsoft/index_old.html in case it
helps).   If I launch IDL directly, it works fine in unrestriced mode,
but if I launch it from the bat file, I get this:

"No such feature exists
feature: idl
license path: C:\RSI\license.dat; C:\RSI\license\idl60se_license.lic
flexim error: -5,7357 system error: 2"

Then IDL starts but will only run in 7 minute demo mode.

I'm running IDL 6.0 student edition (on an AMD64 based platform if it
makes a difference).

Any ideas would be gratefully received :/

Phil
