
Subject: Registration of 3D medical images

I've just started to use IDL and I want to develop some utilities for registering multimodality images. IDL seems to have some useful routines for 2-D which are not available in 3D. In particular:

CONGRID - the CUBIC keyword doesn't apply in 3D
POLY_2D
POLYWARP

Does anyone know of 3D versions of these routines which are available?

Thanks
