Check out SubEthaEdit for the Mac (RSI Sales Engineer put this
together). I use it next to an OS X console window running command
line IDL. In other words, Edit in SubEthaEdit, compile and run from
the IDL command line.

<https://www.codingmonkeys.de/subethaedit/>

Once you have installed the above, then download/install the IDL 'Mode'

<https://www.codingmonkeys.de/subethaedit/modes.html>
