Subject: End-of-line insertion for table widgets (a year later)

Hello,

Just an interesting FYI to share with you. A year ago I posted a
question about widget_tables and end-of-line insertions... Here's a
link to that thread...

http://tinyurl.com/6g6p6

I have just discovered (today) that either that MacOSX (now 10.3) or IDL
(now 6.1) has changed the end-of-line insertion character to only 10B
and tabs and arrows generate no "WIDGET_TABLE_CH" events.

Cheers,
Ben
