Ah, the benefits of living under a rock:

[12:37] YT [suttungr:~] > idl  
IDL Version 5.5a (linux x86). (c) 2001, Research Systems, Inc.  
Installation number: \*\*\*\*-\*.  
Licensed for use by: MAD SCIENTISTS LTD.

```
IDL> ++(((a=1))=3)  
++(((a=1))=3)  
^  
% Syntax error.  
IDL> help,((a=1))=3  
% Expression must be named variable in this context: <INT ( 3)>.  
% Execution halted at: $MAIN$
```

Sooo... what exactly are the reasons to "up"grade to V6?

:)

cordially

Y.T.
