Ah, the benefits of living under a rock:

```
[12:37] YT [suttungr:~] > idl
IDL Version 5.5a (linux x86). (c) 2001, Research Systems, Inc.
Installation number: ****.*.
Licensed for use by: MAD SCIENTISTS LTD.
```

```
IDL> ++(((a=1))=3)
```

```
++(((a=1))=3)
```

```
^
```

```
% Syntax error.
```

```
IDL> help,(((a=1))=3)
```

```
% Expression must be named variable in this context: <INT    (
3)>.
```

```
% Execution halted at: $MAIN$
```

Sooo... what exactly are the reasons to "up"grade to V6?

:)

cordially

Y.T.
