
Subject: Contouring zonally-symmetric fields with map_set

Hi all. I use map_set (specifically with polar stereos around the south pole, but I think that's irrelevant) and then contour. All works fine unless the field I am contouring is zonally symmetric (or a portion of it is). Then, IDL decides "ok, all the contours are at the same latitude, no need to draw circles, I'll draw straight lines". On a polar stereo plot, this then produces rubbish. If the field is entirely symmetric, all you get are dots at 0 E!!!

I have a solution: add a small amount of random noise to the field. However, its a kluge (and therefore in the best traditions of programming... ;-)

Any better solutions?
