So I had the problem too that my Carbon Emacs (I'm on Mac OS X) would not see my IDL_PATH definition in my .cshrc file. Starting from the shell remedies the situation, while adding my path definition to ~/.MacOSX/environment.plist does not seem to change anything.

Might the "~/.MacOSX/environment.plist" route be a feature of the past (pre-10.3 or so)?

Or is there something to be tweaked in my Mac?

How else could I make Emacs.app see my .cshrc or the IDL_PATH setting at least? Is there a way to 'source' a file or define paths in .emacs?

No urgency to those questions, starting from the shell works fine. More a remark to the IDLWAVE FAQ author.

Cheers,

Chris
