Here is an article describing the basics of contouring this
kind of data on a map projection.

   http://www.dfanning.com/tips/mapcontourdata.html

What you will want to do is add your image to the map
projection (using MAP_IMAGE, for example) right before
the CONTOUR command. Here is an article that describes
how to overlay a 24-bit JPEG image onto a map projection.

   http://www.dfanning.com/tips/map_image24.html

Cheers,

David
