Hi to all,

I am the fresher level student of M.Tech of IDL. I am doing some project related with Metreology. I have a JPEG image showing map of country. I know the Min. LAT,Max. LAT,Min. LOG, Max. LOG cornors of that image. I have a file which have three fields

LAT	LONG	Temp. Value
-----	------	-------------

---	-----	-----
-----	-------	-------

Now the problem is that i want to draw the contours of Temp. Value on the image using this TXT file. Please advise me. I will be very thankfull to him. Because it is so necessary for my Studies.
Thanks in advance.

Vinesh Gautam
