Subject: DLM error

Posted by b_gom on Thu, 07 Apr 2005 22:22:36 GMT

Hello any DLM experts,

Does anybody know what the following error means?
% Internal error: IDL_KWFree() bad nesting.

I'm obviously doing something wrong in handling keywords, but what
should I be looking for? I don't explicitly call IDL_KWFree()..

Thanks

Brad
