Subject: Segmentation fault with IDL 5.5 + Debian Testing/Unstable
Posted by Rajesh on Fri, 15 Apr 2005 02:21:56 GMT

Hi,

This is my first post here. I am running IDL 5.5 + Debian Testing on my
machine and after upgrade to
Linux kernel 2.6.x, I am getting core dumps while starting idl on
command line. Has anyone seen this before? Same version of IDL works
fine on Fedora Core 3 with 2.6.10. I can get it to run with
LD_ASSUME_KERNEL=2.4.1 set on command line, but it would be great if I
can find the real problem.
