I have the following file 't.pro':

```
pro t1  
print,'t1'  
end
```

```
pro t  
print,'t'  
end
```

```
pro t3  
print,'t3'  
end
```

IDL 6.1 gives:

```
IDL> .comp t  
% Compiled module: T1.  
% Compiled module: T.  
% Compiled module: T3.  
IDL> .run t  
% Compiled module: T1.  
% Compiled module: T.  
% Compiled module: T3.
```

Isn't .run supposed to EXECUTE the main program?

What is the difference between .compile and .run?

Or what am I missing?

marc
