
Subject: .compile vs .run

I have the following file 't.pro':

```
pro t1
print,'t1'
end
```

```
pro t
print,'t'
end
```

```
pro t3
print,'t3'
end
```

IDL 6.1 gives:

```
IDL> .comp t
% Compiled module: T1.
% Compiled module: T.
% Compiled module: T3.
IDL> .run t
% Compiled module: T1.
% Compiled module: T.
% Compiled module: T3.
```

Isn't .run supposed to EXECUTE the main program?
What is the difference between .compile and .run?
Or what am I missing?
