I have another similar problem.

In RedaHat 9 there isn't no problem. Now I want to install in a laptop
with Ubuntu (Debian) distribution. The kernel is 2.6.10.

But my problem is that I can start the installation proces. When execute:

```
cd /cdrom  
/bin/sh ./xinstall.sh
```

I recive the error:

```
./xinstall.sh: line 307 :/cdrom/install/xinstall/xinstall.linux.x86  
Permission denied.
```

Any ideas?

Thanks,
Antonio
