Hi Chris, Bob,

I am using WV_CWT from the wavelet package of IDL.

Basically I want to use several wavelets but for now I am using morlets.

Then I want to delete certain frequency (scale) ranges and resemble what is left.

The wavelet can be retrieved from the `wv_fn_xxx` functions.

The scales from the WV_CWT function (I need to choose /SPATIAL right?)

Anyhow, the result looks not like it should...
