Dear all :)

I would like to about the right way to write programmatically
(throughout IDL - ENVI batch mode) ONE-band image file (byte-format) as
a band of the new MULTI-band image.

During the work over some project I m getting a lot of gray-scale image
files that I want to write as bands in multi-band image file. Is it
possible thoughout regular way with ENVI_WRITE_ENVI_FILE with some
specifivations?

Thank you in advance

Michael
