I have the following problem...
I have three 2-D arrays I want to make a contour using iTool...
anything goes well...but the only problem I face is that in the axis it
does not show the original values contained inside the arrays but just
the position of them....how can I solve this problem?
I want in the axis the original values to be contained.
If I do the contour using idl only I face no problem...but when using
iContour this problem arises...
