I too did Archive & Install, and then moved IDL over and this
problem showed up. I just re-downloaded and re-installed IDL 6.1 and
the problem is still there.

Did you install the new X11.app from 10.4 (v1.1)?
Are you running X11.app or something else (Xdarwin)?
Do you have the problem where X11 does not come to the foreground?

   -k.
