Hi, I'm a new user of IDL so apologies if this is a FAQ (although I did do a quick check of the FAQ List so hopefully it isn't!). Can somebody tell me how to make IDL print out an Angstrom symbol? It seems to be part of the default font table if one knows how to use the ISO encoding to specify the character, which unfortunately I don't and can't figure out from the documentation.

Many thanks,

Bob Abraham ([abraham@ast.cam.ac.uk](mailto:abraham@ast.cam.ac.uk))
