I did an archive + install, not an upgrade so I got the latest X11 (v1.1).

I could try downgrading, or maybe if I decide to upgrade another computer before this is fixed I will keep the X11 that comes with 10.3 (v1.0 I presume?). That should help isolate the problem.

FYI, there is another 10.4 + X11 problem that a lot of people are experiencing: X11 no longer moves to the foreground when you CMD+Tab to it from another application. It gets the keyboard focus, but it does not raise. Sort of like my old *nix boxes used to behave. If you click 2x on the Dock icon then it comes to the front.

-k.
